"EASY TO DRAW"

Eureka Mower Co.,
Utica, N.Y.

WHEREVER THE EUREKA GOES IT MAKES FRIENDS, AND FAST ONES.

It's a "Star Pointer" in Speed.

The following are some of the many letters we are receiving to the effect that the Eureka Mower is the **best** :

GRANGE MUTUAL FIRE INSURANCE COMPANY.

CHAS. MCDANIEL, *President*.

WEST SPRINGFIELD, N. H., Aug. 7, 1896

EUREKA MOWER CO., UTICA, N. Y.:

Dear Sirs—I have personally used the Deering machine, the "Ideal," for a few days this season, and am now more convinced than ever that for general use, the **EUREKA is the best Mower to be had**. I shall want one of your new patterns for another season.

[Mr. McDaniel is also President of Master State Grange.] CHAS. MCDANIEL.

CASTALIA, Ohio, July 28th, 1897.

GEO. B. DAVISON, *Manager*:

My six foot Eureka Mower has done splendid work. I am much pleased with it. Would not take a side cut as a gift and use it on my farm. Will send check July 30th.

Yours truly, A. H. RANSOM.

POSTOFFICE GRAYLEDGE FARM,

TOREGA, Va., July 22, 1897.

T. B. TERRY, HUDSON, OHIO:

Dear Sir—I shall esteem it a favor if you will advise me of whom the Eureka Mower which you favorably mention in the *Practical Farmer* 24th inst., can be had. It does not seem to be advertised in the paper. Yours truly,

EDMUND C. PECKLIN.

HUDSON, OHIO, July 26th, 1897.

EDMUND C. PECKLIN, Esq.:

Dear Sir—The Eureka Mower is made by the Eureka Mower Co., Utica, N. Y. I have used one nearly twenty years. Have just got a new one. When I bought the first one they said if after I had used it a year, I was not satisfied to throw away my side cut machine and pay for theirs, they would receive it back in settlement. I paid for it, and am of the same opinion still. It draws easy, is very fast, and leaves hay in as good shape to cure as a side draft machine and tedded.

Yours truly, T. B. TERRY.

HUDSON, OHIO, August 11th, 1897.

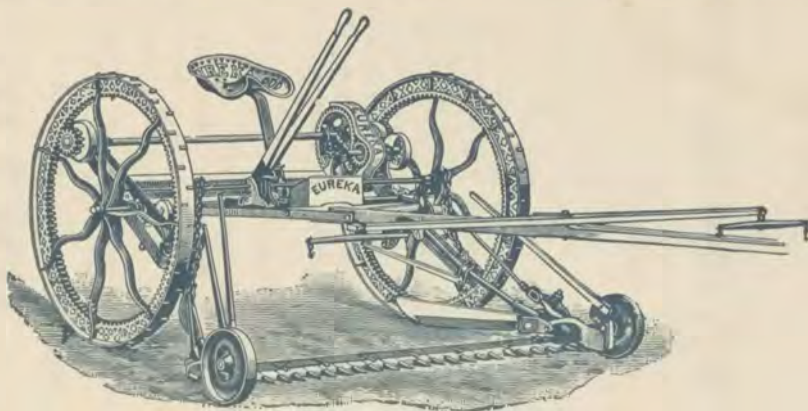

EUREKA MOWER CO., UTICA, N. Y.:

Gents—We set the Mower up and have finished our mowing. It runs like a top. Great improvement over the old one. The new self-oiling Pitman connection is a big thing for a little one; it keeps those wearing parts oiled nicely, which is very essential, saving wear and lost motion.

Yours truly, T. B. TERRY.

Every machine guaranteed to be as represented. It has no equal, and the cheapest Mower for a farmer to buy. The Eureka does its own tedding without bruising or breaking the hay. Making a comparison in cost, add price of a side draft Mower and cost of a tedder together, then write us or our agent and see if the Eureka cannot be bought for less money.

The Dealer's Pride and the Farmer's Friend

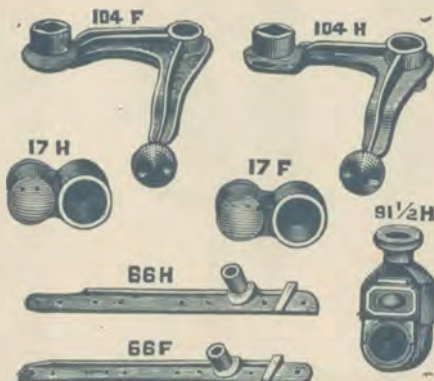

TWO HORSE EUREKA MOWERS, Three Sizes, 5, 6 and 7 Foot Cut.
ONE HORSE EUREKA MOWERS, Three Sizes, 36, 42 and 48 Inch Cut.

Recent Improvements made in Eureka Mower.

The following cut shows our wonderfully improved Rock Shaft and Knife connection. The wearing surfaces are much larger, and work constantly in oil.

 marked
 No. 40 D.**

THIS IS THE VITAL PART OF EVERY MOWER. OUR CONSTRUCTION REDUCES FRICTION TO THE MINIMUM AND GIVES GREATEST STRENGTH AND DURABILITY.

The Gearing of our Mower has all been made from New Cut, Coarser, Stronger Patterns, which obviates premature wear or breaking of Pinion Wheels or Ratchet Gears.

PITMAN HEADS are of the most durable character, and are easily adjusted to take up lost motion or wear, should it occur.

The Cutting Apparatus is perfection, the guard used an open one, allowing all substances which have a tendency to pack under the knife, to fall to the ground. The cutter bar does not have any bolt heads, nuts or obstruction of any kind on its top, to retard the passage of the grass over it; these features prevent clogging of the knife in the most unfavorable conditions of cutting, and render the Mower much lighter draft. We have adopted a **hardened Steel Knife Back Rest**, which prevents wear of the guards by the section, and which keeps the knife in proper position to form a shear cut with the guard plates, and to do the best work during the entire life-time of the Mower, by replacing these knife back rests (which cost but a trifle) when they become worn.

A SPRING ATTACHMENT has been applied to the Eureka which transfers a large part of the weight of the Cutter Bar from the Lead Wheels to the Axle, giving greater traction and cutting power, and causing the Cutter Bar to raise and lower with greatest ease. **The Shoes to our Mower are Malleable Iron.** The machine has been strongly braced in its frame part, and is made strong, durable, and practical throughout.

All the above improvements made in our Mower have been thoroughly tested in the field, and their great value has been universally proclaimed by the farmer.

For the many advantages which the Centre Draft Eureka has over other Mowers, we refer you to our catalogue.

ALL WHO USE THE EUREKA WILL HAVE NO OTHER MACHINE.

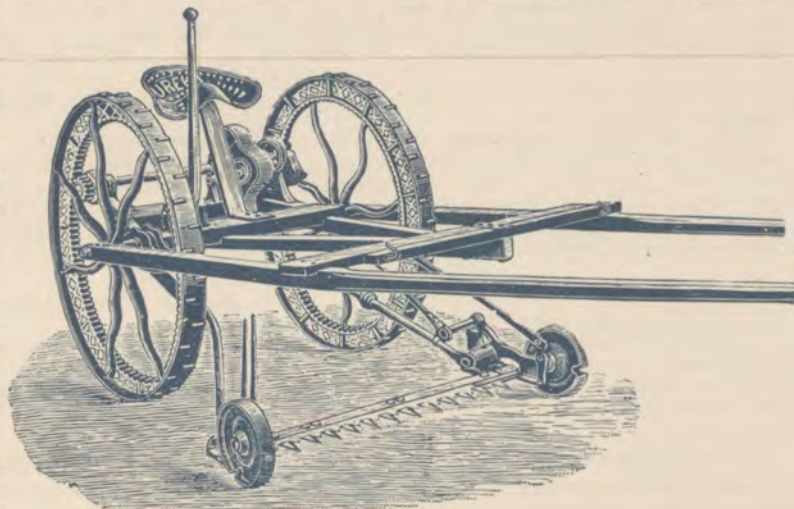

ONE-HORSE

EUREKA

MOWER.

The only one-horse Mower cutting all the space over which it passes, making it unrivalled in cutting lawns, between rows in vineyards, coffee plantations, or wherever it is necessary to cut grass or weeds in narrow places.

These Mowers are built essentially on the same lines as our two-horse Mowers. When desired, we furnish a pole so two horses can be used.

We are pleased to furnish any information desired, upon application.
