

PEERLESS HAY TEDDER

THE LIGHTEST RUNNING, BEST BUILT, STRONGEST AND MOST SATISFACTORY HAY TEDDER ON THE MARKET

The frame is made of best quality angle steel, thoroughly jointed and bolted, and is supported by one strong truss on the six-fork and two trusses on the eight-fork machine.

The crank shaft is of Bessemer refined steel, fitted with long bearings.

The fork arms are clamped to the crank boxes, instead of being drilled and bolted.

The forks and fork springs are made of the best quality spring steel.

The frame is provided with relief springs, which saves strain on the machine in the event of forks striking an obstruction.

The wheels are **all steel**, with a heavy two and one-half inch tire, and eighteen round spokes having forged shoulders at both ends; these are **riveted through both tire and hub**.

Lever for raising and lowering and foot treadle for throwing in and out of gear are within easy reach of the driver.

The seat is adjustable—can be raised or lowered to suit driver.

All bolts throughout the machine are securely held in place by double or lock nuts.

Every tedder is provided with combination thills and pole, can be changed from a one- to a two-horse machine in a very few minutes.

In fact, the "Peerless" is the greatest "kicker" on earth, but the farmer who uses it never kicks.
