

The Minneapolis Harvester & Binder.

HAS ESTABLISHED ITS SUPERIORITY

- For close cutting, to secure lodged and short grain.
- For absolute certainty in binding, using the least twine, and tightest bundles.
- For perfect separation of bundles, uniform in size, allowing binding and stacking.
- For a Reel easily adjusted, while in motion, to all positions with only one lever.
- For ease in raising and lowering the entire machine, while with only one lever.
- For a tilting device, with good range, and easily handled.
- For the best angle iron cutter bar, with sickle driven by pit as a moving knife.
- For the **Automatic Packer Trip**, used only on the "Minneapolis" which absolutely prevents the Binder from clogging, in condition of the grain.
- For a new device for moving the Binder backward and forward simple and practical, overcoming many of the objections contrivances used for this purpose.

Mr. J. F. APPLEBY, the inventor of the "Appleby Twine" is Superintendent of our factory, and dictates the construction of our machine. He has a world-wide reputation as one of the mechanics of the age. He has made the **MINNEAPOLIS** most perfect Harvester and Twine Binder of the day.

IMITATED BY MANY.

EQUATED BY NONE.

FARMERS BELIEVE IT IS THE BEST
AND ARE READY TO BUY IT.

AGENTS ACKNOWLEDGE ITS SUPERIORITY
and give it preference over all others.
