# THE JOHNSTON HARVESTER CO.

MANUFACTURERS OF

A COMPLETE LINE

—OF—

## HARVESTING MACHINERY.

FACTORY AND HOME OFFICE:

BATAVIA, N. Y., U. S. A.

PRINCIPAL BRANCHES:

|                    |   |                        |
|--------------------|---|------------------------|
| Chicago, Ill.,     | = | 30 and 32 S. Canal St. |
| Philadelphia, Pa., | = | = 1917 Market St.      |
| Pittsburgh, Pa.,   | = | = 418 Ferry St.        |

EUROPEAN OFFICE:

London, England, = 1 and 2 Chiswell St.

## Notice Our Complete Line of Improved Machines Shown on the Following Pages.

---

|                                                  |             |             |
|--------------------------------------------------|-------------|-------------|
| Continental Light Steel Binder,                  | -           | 5½ feet cut |
| Continental Light Steel Binder,                  | -           | 6½ feet cut |
| Continental Mower, No. 6, (changeable speed),    | 4½ feet cut |             |
| Continental Mower, No. 6, (changeable speed),    | 5 feet cut  |             |
| Continental Mower, No. 6, (changeable speed),    | 6 feet cut  |             |
| No. 5 Mower, rear cut, (changeable speed),       | 4½ feet cut |             |
| Mayflower Mower, (enclosed gear, single speed),  | 4½ feet cut |             |
| Continental Light Reaper, with folding platform, | 5 feet cut  |             |
| Truck for Transporting Binder.                   | -           | -           |
| Sheaf Carrier.                                   | -           | -           |

---

*We shall continue to use the Best Materials and to  
exercise the great care in manufacturing which  
has given our machines the excellent  
reputation they now enjoy.*

**All Machines Fully Warranted.**

**PRICES AND FURTHER PARTICULARS FURNISHED ON APPLICATION.**

# THE "CONTINENTAL" LIGHT STEEL BINDER,

BATAVIA, N. Y., U. S. A.

IT LOOKS SYMMETRICAL AND PRACTICAL.

IT IS AS GOOD AS IT LOOKS!

JOHNSTON HARVESTER CO.,

# The Continental Light Steel Binder

IS JUST WHAT WE CALL IT,

**A GENUINE STEEL FRAME BINDER,**

And while it is Lighter Than Other (so called) Steel Frame Binders,

IT IS THE

STIFFEST AND STRONGEST MACHINE EVER PRODUCED.

There are SEVERAL GOOD BINDERS but we claim to  
have some advantages.

**READ AND JUDGE FOR YOURSELF.**

## READ THE FOLLOWING.

---

1st. We run every Machine and MAKE IT BIND straw satisfactorily BEFORE IT LEAVES THE FACTORY. This is a strong point, as it saves the farmer a great deal of trouble in adjusting the machine.

2nd. Our canvas runs close to the back of the knife with no heavy sill between. This carries the grain to the elevator evenly, and—

3rd. This, with our divider extension, enables us to pick up the WORST OF LODGED GRAIN.

4th. Many binders have MUCH TROUBLE with grain DRAWING DOWN BETWEEN THE BINDER DECK and THE CANVAS. We are the only ones using an adjustable piece on upper edge of deck by means of which the space may be opened or closed to suit the condition of the grain—wet, dry, clean, or grassy—entirely doing away with the above difficulty.

5th. If you were to stand by a Binder and adjust the butts of the bundles with your hand, you would make exactly the same motion which OUR ADJUSTER makes. No canvas butter can do as good work or last one-third as long.

6th. Adjustment for the longest or shortest grain is made easily by the driver from his seat.

7th. Every shaft runs in a metal box. NEVER BUY A MACHINE which cannot show this quality. It may run well at first but will soon run hard and wear out.

8th. All our rollers have iron caps to prevent STRAW WINDING AROUND THE ENDS and making them run hard.

---

We Might Enumerate Many Other Advantages Peculiar to Our Machine, but Have Not Space For All.

JOHNSTON HARVESTER CO.,

LIFE

SIZE.

SECTIONAL  
VIEW  
OF  
CHANNEL  
STEEL.

THESE

CUTS

SPEAK FOR THEMSELVES.

No Other Form Gives Equal Strength with Same Weight of Material.

THERE ARE NO WEAK SPOTS IN THIS FRAME.

BATAVIA, N. Y., U. S. A.

## A KNOTTER THAT DOES NOT FAIL TO KNOT.

The fewest pieces.

No tucker depending on a spring  
for its action.

Economical in use of twine.

No baby bundles.

Everything that goes through has  
a string tied around it.

OUR  
EXTRA  
DISCHARGE  
ARM.

A GREAT HELP  
IN  
SOME  
KINDS OF GRAIN.

## OUR CHAIN DRIVE.

NO HEAVY TRAIN OF  
CAST IRON GEARS.

LIGHT, SURE, EASILY ADJUSTED.

JOHNSTON HARVESTER CO.,

# OUR CHAIN DRIVE.

Lighter, Stronger, AND More Durable Than Gearing.

More Depends Upon the Reel Than Is Generally Supposed.

Our Reel has Great Capacity, a Remarkably Long Throw, Up and Down, Forward and Back.

Speed of Reel can Be Changed in Twenty Seconds to Suit the Condition of the Crop.

BATAVIA, N. Y., U. S. A.

## The Sheaf Carrier

Is Light, Simple and  
Very Effective.

The driver dumps it  
by raising his foot from  
a trip lever, which allows  
the bundles to be de-  
posited on the ground.

WITH SHEAF CARRIER.

**SHEAF CARRIER FOLDED.**

By a slight pressure of the  
foot the carrier is returned to  
position again.

It can be folded for trans-  
portation, or for passing through  
gates.

## THE BEST TRANSPORTING TRUCKS KNOWN.

A Binder can be loaded in a few minutes, by a **TEN-YEAR OLD BOY, EASILY.** High Wheels with Wide Face. Will carry a machine anywhere it could be carried in a wagon.

# New Continental Mower, No. 6.

Made in Three Sizes, viz : 4 1-2, 5 and 6 Feet Cut.

The 5 ft. and 6 ft. Machines are Made with Wide Trucks.

JOHNSTON HARVESTER CO.,

BATAVIA, N. Y., U. S. A.

## CHANGEABLE SPEED GEAR.

We could print ANY NUMBER OF TESTIMONIALS from farmers as to the value of the CHANGEABLE SPEED.

In light grass or with a fast walking team there is no use of wearing out the machine, or wasting power by running at the high speed necessary to cut heavy clover, or to mow with an ox team.

**SAVE** wear ; **SAVE** power ; **SAVE** horseflesh and feed ; **SAVE** repairs. Do perfect work in *any kind of grass* with the changeable speed mowers.

## THE PITMAN CONNECTIONS

are the most perfect in use. The Pitman is attached to the knife by a ball and socket, so that the wear can be taken up by bolt and nut, and the joint kept tight, avoiding the hammer and wear on crank-pin and shaft that so soon uses up a machine. This connection, kept tight and used as directed, will add years of life to a mower.

VIEW SHOWING METHOD OF ATTACHING GUARD TO BAR.

## THE FINGER-BAR

is of cold-rolled iron, the most expensive material in use for that purpose, and is strong enough to bear the heaviest strain. The guards are malleable iron, with steel plates. The sections, three inches wide, are made of the best English steel. The guards are fastened to the finger-bar with bolts instead of rivets, making it easy to replace them when necessary.

## THE WIDE-CUT MOWER

Is Built With Either 5 ft. or 6 ft. Bar.

It Has a Wide Truck and No Side Draft.

THE BEST OF ITS KIND.

HIGH WHEELS—Positive Tilt (not a rocking motion)—Carrying wheels at both ends of the finger bar, etc., etc.

## NO. 5 MOWER,—Rear Cut. CHANGEABLE SPEED.

This is the same as our No. 6 Mower, in gearing, finger bar, material, etc., as nearly as rear cut and front cut mowers can be built alike.

It has been found remarkably well adapted to uneven lands, adjusting itself perfectly to inequalities of the ground.

# THE "CONTINENTAL" REAPER.

THE GREAT PRIZE WINNER.

JOHNSTON HARVESTER CO.,

BATAVIA, N. Y., U. S. A.

THE CELEBRATED  
**Light Draft Continental Reaper**  
WITH FOLDING PLATFORM.

*For Lightness of Draft, Durability, Ease of Operation,  
and Excellence of Finish, it is Unequalled. Thou-  
sands of Farmers Testify to Its Efficiency  
on Steep Sidehills and on Rough  
and Uneven Ground.*

CUTS A SWATH FIVE FEET WIDE.

WILL PASS THROUGH A 9-ft. GATEWAY.

THERE has never been a reaper manufactured that has attained the same popularity that this machine has in the length of time it has been before the public. It has proved its ability to handle the heaviest crops of grain or sowed corn grown in any part of the world, and is especially valuable on side hills and rolling land, where a light machine is desirable. Being constructed largely of steel, wrought iron and malleable iron, it is very light, yet strong and durable.

It has the only Rake Trip, that can be set to work automatically on either the second, third, fourth, fifth or sixth rake, and still be under full control of the driver's foot, to rake at will. It delivers the most perfect gavel and makes the best separation. It leaves ample room for the team and machine on the next round, either on side hill or level land.

The platform can be folded with less trouble than any other.

It is the stillest running and strongest Light Reaper in the market. It has steel shafts and adjustable ball and socket pitman connections.

Many other advantages will be found on an examination and trial of this machine, all being combined to form the

**BEST LIGHT REAPER IN USE.**

# THE MAYFLOWER.

JOHNSTON HARVESTER CO.

SINGLE SPEED—BALL AND SOCKET PITMAN CONNECTIONS. Built to meet a call for a machine weighing a little less than our No. 6.
