

THE DOUBLE HARPOON HORSE HAY FORK.

S. & D. HARRIS,

Patented April 23, 1867.

Re-issued June 8, 1868.

THE PENNOCK MANUFACTURING CO.,

Kennett Square, Pa.

NOTICE.

This is the only legitimate DOUBLE HARPOON Horse Hay Fork. All others are infringements, and will be dealt with according to law.

After an experience of three years with this Fork, we have no hesitation in presenting it as

THE BEST AND CHEAPEST ARTICLE

in its line ever offered to the public. It has been extensively introduced in Pennsylvania, New Jersey, Maryland, Delaware, Michigan, New York, Ohio, the New England and other States, and the testimony is almost universal, wherever it has gone, that it is a

PERFECT IMPLEMENT

Although it is but three years since this fork was introduced, thousands have already been sold, and the demand is rapidly increasing in all sections of the country. It is simple in its construction.

STRONG, DURABLE,

and very convenient to handle. It has no exposed parts or points to be injured by contact with beams, &c. It penetrates the hay easily, and compresses it from top to bottom, thus adapting it especially to the handling of

FINE, SHORT AND BRITTLE HAY,

Unbound Oats and Barley,
AND LOOSE STRAW.

TESTIMONIALS.

FROM ISAAC W. VANLEER,

Many Years President of the Chester County Agricultural Society.

NORWOOD, Chester County, Pa.

August 27th, 1869.

The Harris Fork is by far the best implement in that line I ever used or saw used. My experience with unloading-machinery is large, and for pitching into various kinds of mows and hay-house doors, the old-fashioned long-handled Horse-Fork was about as good as any, and I could hardly persuade my best man that anything could do better, especially after he had just thrown a steel hook (highly recommended) off the lead in disgust. But after using your fork for half a day, he said that, "if he owned a farm, and could not get such a Fork for less, he would give \$100 for it."

I do not see how it would be possible to make anything to answer the purpose better. I think the end of improvement in that line has been reached. Inventors may rest—there is nothing beyond.

Enclosed you will find \$12, and if you had said \$20, all progressive farmers would have been compelled, by their own interest, to purchase.

FROM RAYARD TAYLOR.

"CEDARCREST," KENNETT SQUARE, PA.,
September 16, 1869.

I have this summer made use of Harris' Double Harpoon Hay Fork, and my own satisfaction with its performance is even excelled by that of my harvest hands. It is one of the simplest and most useful inventions I have ever seen, both for economy of time and labor; and I am sure that no one can try it without being fully satisfied.

FROM MILTON CONARD,

Trustee of the Eastern Pennsylvania Experimental Farm.

WEST GROVE, Pa., April 10, 1870.

I wish to say that the superiority of the Double Harpoon Hay Fork over all other implements of this class, consists in its capacity to grasp a sufficient forkful of any kind of hay or straw, and in the great ease with which it is discharged and returned to the load. Although a trifle heavier than the single harpoon, there is really less labor in operating it. From the manner of its hold, the forkful being wide and comparatively shallow, the hay is separated from the load with less power, and is more easily placed in the mow.

FROM BARNES & DAVIS.

CANAJOHARIE, N. Y., Jan 13, 1870.

GENTLEMEN:—The Double Harpoon Forks with us have proved a great success. All that have used them, like them very much. We shall want more next season.

FROM McLANAHAN, STONE & ISETT,

HOLLIDAYSBURG, Pa., Jan. 1, 1870.

GENTLEMEN:—We have manufactured and sold various kinds of Horse Hay Forks, but the Double Harpoon is the only one in which we have sufficient confidence to place in the hands of the farmer upon the condition that he shall have the choice of keeping the Fork or having his money refunded. We have never had one returned.

A VOICE FROM NEW JERSEY.

GENTLEMEN:—The Harris Double Harpoon Horse Hay Fork we consider superior to any now in use, being better adapted to take up all kinds of hay and unbound oats than any other, and is particularly suited to work in at a window.

THE PENNOCK
 PREMIUM
CORN SHELLER.

THE PENNOCK MANUFACTURING CO.
 Kennett Square, Pa.

The Pennock Corn Sheller

Is recognized by Farmers, Dealers in Agricultural Implements, and Mechanics, wherever it has become known, as indisputably

SUPERIOR TO ANY OTHER.

For twenty-five years past, the manufacture of these shellers has received a large share of attention in our shops, and during all that time it has been our constant aim to

Improve, Perfect and Adapt them

To the needs of the farmers of the Middle, Southern and Western States. The material used in their construction, is

SELECTED WITH GREAT CARE,

and the workmen under whose superintendence they are made, have had

LONG PRACTICE

In building them. The result of this care, attention and long directed experience, has been the production of the most

PERFECT MACHINE
IN THE MARKET.

**SCORES OF
 FIRST PREMIUMS**

Have been awarded it at County, State and National Fairs, including the

GREAT SILVER MEDAL

At the United States Agricultural Fair in 1868. The manufacturers of Corn Shellers in many other localities have fully recognized its superiority by endeavoring to copy it in every essential particular.

HUNDREDS OF TESTIMONIALS

of the most flattering character might be presented in their favor, but instead of these, we respectfully offer, with the fullest confidence, as references, the thousands of farmers who have used them during the past twenty-five years.

Every Sheller we Build is Warranted

TO BE WELL MADE,

OF GOOD MATERIAL, to do its work properly, and is stamped with the name of our Company in full upon it.

Liberal terms to agents. For further particulars, address
