

MONITOR MOWER,

AND COMBINED

MOWER AND REAPER,

NISHWITZ'S PATENT.

MANUFACTURED

BY

F. NISHWITZ,

Nos. 134 to 144 FIRST STREET,

WILLIAMSBURGH, L. I.

J. NEWTON CLOYES,

General Agent for Central and Western New-York,

AND DEALER IN

Horse Powers, (Lever or Tread,) Threshers and Cleaners,
Circular and Drag Saws, and Agricultural
Machinery Generally.

Office, 135 Genesee Street, Utica, N. Y.

Sold by

THE SUBSCRIBER

WOULD RESPECTFULLY CALL THE ATTENTION OF FARMERS AND
OTHERS INTERESTED IN

MOWERS AND REAPERS,

To His Latest Improved Machine,

THE MONITOR.

This Machine has been in general use for the past three years, during which time it has been submitted to the most thorough and rigid tests, not only as to its capacity to do good work on all kinds of bottom and under all circumstances, but the utility of its construction, its durability, and the amount of Power required to operate it; fully demonstrating the truth of the assertion made on its first introduction, that I had embodied in the MONITOR, without any complication of its parts, the following very desirable points, viz: lightness with strength and durability, easy draft, convenience of management, portability, simplicity of construction, and adjustability to all the different kinds of work or land on which it is used.

First—To obtain these important results I have wholly discarded the old system, and resorted to the use of PLANETARY GEAR, thereby securing many advantages which cannot be otherwise obtained. This application of gearing constitutes one of the most important features of my machine. I would specially invite those who intend to purchase the coming season, to give it a careful and thorough examination, in order that it may be fully understood, and its merits duly appreciated.

Secondly—In the peculiar construction of the JOINT CONNECTIONS of the Cutter Bar, I simply use a tongue and groove COUPLING JOINT, which gives to the Bar, in connection with the tilting motion of the frame, all the freedom and scope necessary under all circumstances, to conform to all uneven surfaces, and still remain completely under the control of the operator. This is accomplished in a more simple and durable manner, than can possibly be obtained from any kind of hinge or double hinge joint.

Thirdly—The PRINCIPLE of BALANCING, by which the Cutter Bar is made to run lightly over soft, sandy, rough or stony ground, or to make it hug the ground as closely as desirable to cut lodged grass in good style, by simply altering the fulcrum which supports the seat; also removing all pressure on the horses' necks, except the weight of the pole, when the Bar is raised to pass over obstructions, or when folded in moving to and from the field.

The application of PLANETARY GEAR, the JOINT CONNECTIONS, manner of BALANCING, and lever for raising and lowering the Bar, are characteristic points of the MONITOR, and in their use and application belong exclusively to me.

The success of the MONITOR is without a parallel. Notwithstanding the strong opposition it has met with from those interested in other machines, and the most unscrupulous misrepresentations made by them, in additions to all the means and influence they have brought to bear against it, it has gained the favor and approval of a discriminating public, and now ranks as the leading and most popular machine of the day.

Of the large number disposed of last year, each cutting from fifty to one hundred and fifty acres of grass and grain, entire satisfaction was given in every instance, all recommending it in the highest terms. Last year I lacked to fill my orders more than one thousand machines, but with the increased facilities I now have for manufacturing, I trust to be able to supply the large and increasing demand.

The MONITOR, for the coming season, has been improved in many respects by the use of malleable instead of common cast iron, for all those parts where strength is required. Such alterations have been made as experience has suggested, being fully determined to keep up with the progress of the times, and furnish the Farmer with a Machine which may be relied upon, with the fullest assurance that it will meet their wants in every particular, and at prices to come within the reach of all.

F. NISHWITZ.

Williamsburgh, L. I., January 16, 1864.

MONITOR IN THE FIELD, PASSING AN OBSTRUCTION.

THE PRINCIPAL POINTS IN THE CONSTRUCTION OF THE **MONITOR** **MOWER AND REAPER,**

TO WHICH WE WOULD CALL YOUR ATTENTION, ARE—

1st—**Two Drive Wheels**, FREE from all GEAR, working independent of each other.

2d—**A new application of Gearing**, constructed on purely SCIENTIFIC PRINCIPLES, (called Planetary Gear) whereby the intermediate shaft and journals are dispensed with, reducing a great amount of friction, and at the same time giving a rapid motion to the crank, forming the most *simple, powerful, and compact* gear ever applied to a Mowing Machine. This gear is entirely supported on the main axle, independent of the frame, consequently is not affected by any undue strain by coming in contact with obstructions, thereby avoiding all possibility of being thrown out of its proper bearing.

3d—**A perfect Joint**, by which the Finger Bar is attached to or taken from the Machine, without the use of pins or bolts, which cannot get loose by wear, as is the case with all other joint-bar Machines; besides it may be worked either loose or rigid at pleasure, by simply turning a nut. It will allow the bar to work *below* a level as well as above, both ends conforming to all uneven surfaces of the ground, and in leaving the field can be folded in a perpendicular position without leaving the seat or stopping the team.

4th—**Arranging the Pole, Driver's Seat and FRAME**, in relation to each other, in such a manner as to balance the weight of the Finger Bar, and prevent any unnecessary pressure on the ground, or throw any weight on the horses' necks while working, or when raised to pass over obstructions, or in any position it may be placed, thus balancing the weight which otherwise must be carried by the pole or a third wheel.

The Seat is adjustable, so as to adapt it to the weight of any person, by simply shifting the fulcrum of its bearing. It is also placed upon an easy spring, and well back over the rear, placing the driver out of all danger, and giving him a good command over the Machine.

MONITOR IN THE FIELD PASSING VIA OBSTRUCTION

5th—**An Improved Finger**, LAID WITH STEEL, hardened and ground to a bevel, forming a perfect sheer edge. It is attached to the bar in an improved manner, is stronger, more durable than any other in use, and will not clog in any kind of grass, wet or dry.

6th—**Steel Shoes**, or Runners at each end of the Finger Bar, adjustable to cut any required height, which is very desirable in cutting lodged grass, or working on rough and stony ground.

7th—**A Perfect Raising Apparatus**, entirely under the control of the driver, by which the Bar can be raised and lowered, or held in any position required. When raised to the full height, the outer end will be six or eight inches higher than the inner, and in all eighteen inches, allowing it to pass over any obstructions or cut grass.

8th—**The Pole** is attached with a joint to the Frame, consequently can bring no weight on the horses' necks, and is placed in such relation to the drive wheels and gear as to avoid all side draft.

9th—**The Cutter Bar** is made of first quality English Spring Steel, imported expressly for this use.

10th—**It is instantly thrown** into or out of gear by the hand or foot. The DRAFT is lighter than that of any other machine.

11th—**The Reaper** is easily attached, and in every way adjustable to cut high or low. The Reel is overhung, and always retains its position parallel with the Platform. The position of the Raker is good, and the grain is easily laid off in a clean and workmanlike manner.

In short, the **Monitor** embraces all the points necessary to constitute a **Perfect Mower** in every particular, besides being as good a **Reaper** as the best. The unprecedented sales it has met with, even in places where other so-called standard machines have been long and favorably known, clearly show not only its utility but superiority. The preference it has taken at every trial with other Machines, for being the *lightest of draft*, and the simplicity of its construction, its durability and easy management, as well as good work under all circumstances, commend it to the notice of every Farmer. It is fully warranted to give satisfaction in every particular. In order that it may be fairly tested, the purchaser will be allowed to cut three acres of grass on trial.

PRICES.

AT THE FACTORY, OR DELIVERED IN NEW YORK.

Monitor, (Nishwitz).....	" 4 " 3 ".....	125 ".....	2,45 " "

The preference is given to the MONITOR for light draft, easy management, and good work.

MILTON ROBINSON,	}	COMMITTEE.
JOHN C. HOLMES,		
WILLIAM MASSMAN,		

At the trial of Mowers before the Monmouth County Agricultural Society, at Freehold, N. J., June 24th, 1863, the Committee report as follows:

Monitor.....	Cutting 4 feet 3 inches.....	150 lbs.....	2,94 lbs. $\frac{7}{8}$ inch.
Monitor, (No. 1).....	" 4 " 9 $\frac{1}{2}$ ".....	175 ".....	3,04 " "
Allen.....	" 4 " 7 ".....	190 ".....	3,45 " "
Hubbard.....	" 4 " ".....	125 ".....	2,60 " "
Ohio.....	" 4 " 7 ".....	237 $\frac{1}{2}$ ".....	4,32 " "
Wood.....	" 4 " ".....	225 ".....	4,69 " "
Buckeye.....	" 4 " 7 ".....	262 $\frac{1}{2}$ ".....	4,77 " "
Ohio, Jr.....	" 4 " 1 ".....	200 ".....	4,08 " "

At the trial of Mowers held in Cazenovia, Madison County, New York, July 1st, 1863, under the direction of the Farmers' and Mechanics' Association, the Committee reported the draft as follows:

Wood.....	Cutting 4 feet inches.....	250 lbs.....	5,21 lbs. $\frac{7}{8}$ inch.
Monitor.....	" 4 " 3 ".....	225 ".....	4,41 " "
Monitor, (No. 1).....	" 4 " 9 ".....	200 ".....	3,51 " "
Buckeye, (No. 2).....	" 4 " 1 ".....	200 ".....	4,08 " "
Buckeye, Sen.	" 4 " 8 ".....	225 ".....	4,02 " "
Hubbard.....	" 4 " ".....	275 ".....	5,73 " "
Ohio.....	" 4 " ".....	250 ".....	5,21 " "
Kirby.....	" 4 " ".....	225 ".....	4,69 " "
Farmer.....	" 4 " 2 ".....	185 ".....	3,70 " "
Russell's Screw Power.....	" 4 " 8 ".....	200 ".....	3,57 " "

At the trial of Mowers in Madison, Morris County, N. J., June 29th, 1863, we were not furnished with a Report of the draft, but judging from the fact, that each of the Judges, Messrs. J. B. Miller, of Madison, Jona. Miller, of Greenvillage, and John Budd, of Chatham, have since bought the Monitor Mower, we must come to the conclusion that it was the best Machine, and the lightest draft.

LITCHFIELD, Herkimer Co., N. Y., July 6th, 1863.

Hubbard.....	Cutting 4 feet $\frac{1}{2}$ inch	200 lbs.....	4,12 lbs. $\frac{7}{8}$ inch.
Buckeye	" 4 " $\frac{1}{2}$ "	150 ".....	3,09 " "
Monitor.....	" 4 " 3 "	150 ".....	2,94 " "
Monitor, (No. 1) ..	" 4 " 9 "	165 ".....	2,89 " "

The Buckeye, Sen., and Cayuga Chief, refused to have the Dynamometer attached.

W. NORTON,
H. L. HARRISON, } COMMITTEE.
C. HARVEY,

DEERFIELD, Oneida Co., N. Y., July 8th, 1863.

Hubbard.....	Cutting 4 feet $\frac{1}{2}$ inch	250 lbs.....	5,15 lbs. $\frac{7}{8}$ inch.
Monitor	" 4 " 3 "	250 ".....	4,90 " "
Davis' Improved..	" 4 "	275 ".....	5,73 " "

GEORGE SHAW,
A. DEWEY, } COMMITTEE.
A. MALLORY,

Average Draft of the MONITOR, as compared with other Machines, at the foregoing trials :

Hubbard.....	draft $\frac{7}{8}$ inch.....	3,99 lbs.
