STAR POTATO MACHINERY

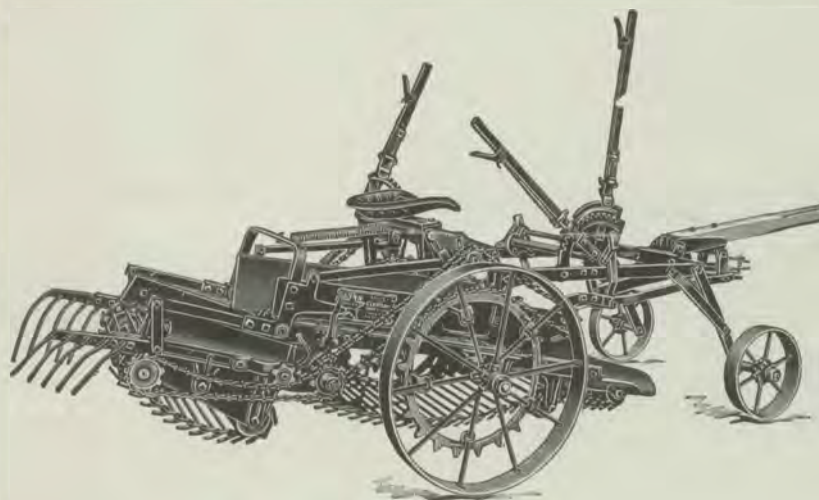

Potatoes deposited in narrow row leaving good clearance for digging next row.

Digging depth can be regulated while in operation.

Gauge wheels in line with shovel — uniform depth in any ground.

Tilting frame allows machine to be turned around on main drive wheels, where seven-eighths of the weight is; this concentration of weight gives fine traction.

Only digger that can be thrown in and out of gear by raising and lowering the second elevator.

Star Standard Potato Digger

Built in two sizes, 20 in. and 22 in. Throat shovels.

Regularly equipped with 3 inch wheels. 5 in. wheels can be furnished at small additional cost.

Hitched under pole, which means directly applied draft.

Side turn rigid pole makes it easy to follow the row. No neck weight.

Special separation process means extra clean potatoes.

Wide open throat — no trouble with weeds and vines. Operates efficiently in stoney ground.

Chain driven, constructed of steel and malleable iron.

Announcing the Addition of
THE STAR POTATO DIGGERS AND PLANTERS
TO THE LINE OF

FAMOUS
Ohio
MODERN FARM MACHINERY

Farmers have bought Star Potato Planters and Diggers for years because they find they have advantages no other digger or planter can give them.

The Star Potato Planters are noted for their ease of operation, accuracy in dropping and sturdy construction.

In the Star Potato Diggers are incorporated patented features that make them the most reliable, convenient and economic diggers on the market.

It is with exceptional pleasure that The Ohio Cultivator Co. announces the addition of these well known potato machines to the Famous Ohio line of farm implements and that they are now being manufactured in their own large Implement Plant at Bellevue, Ohio.

FAMOUS Ohio

Potato Diggers and Planters

Star Tractor Drawn Potato Digger

Is operated from the tractor seat. One lever adjusts the machine for different depths, raises the shovel out of the ground at end of row, raises the second elevator at the rear end, and throws the machine in and out of gear without operator leaving the tractor seat.

Is equipped to dig Irish or sweet potatoes without a change being necessary.

Comes furnished with vine trimmers which are a great benefit for digging Irish potatoes, and essential in digging sweet potatoes.

This is a wonderful machine and can be used back of any tractor.

Stone or nothing else makes any difference with its successful operation

Star Potato Planter, Sr.

Furrows, drops seed (cut or whole), fertilizes, covers and marks—all in one operation.

Plants 100 per cent efficient.

Does not bruise or crush the seed.

Can be easily set to plant 10, 12, 14, 16, 18 or 20 inches apart.

Furrow opening plow does not clog in sod, weeds, long straw or corn stalks.

Covering discs work independently of one another, insuring complete coverage regardless of obstructions.

Perfect action not affected by uneven ground.

On side hills, both discs throw equal amount of dirt.

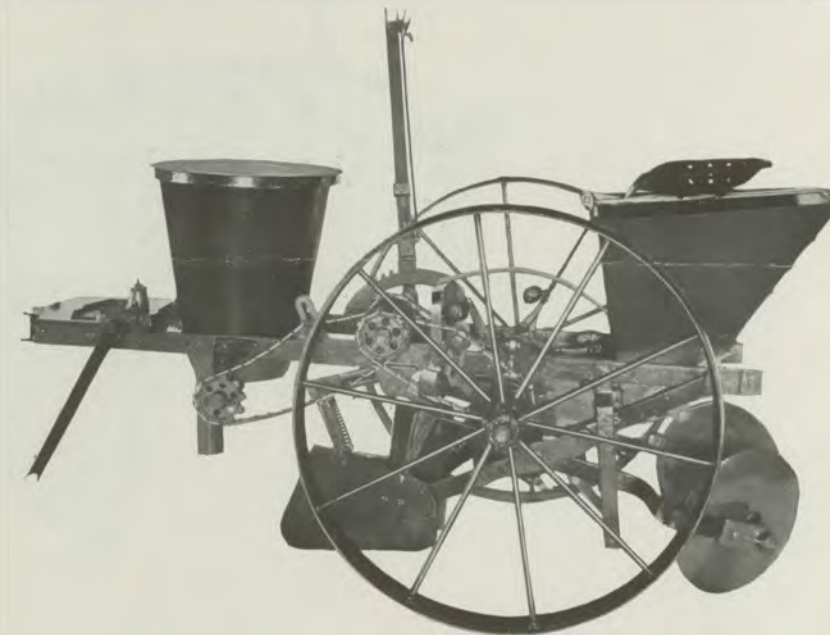

Fertilizer thoroughly mixed with soil.

Draft is light — a 2000-pound team handles it with ease.

High grade steel and malleable iron construction — light and strong.

Star Potato Planter, Sr.

Star Single Row Picker Planter

This machine carries the general construction of our single row bucket planter.

However, has a new and distinctive feature in assuring the picking of potatoes.

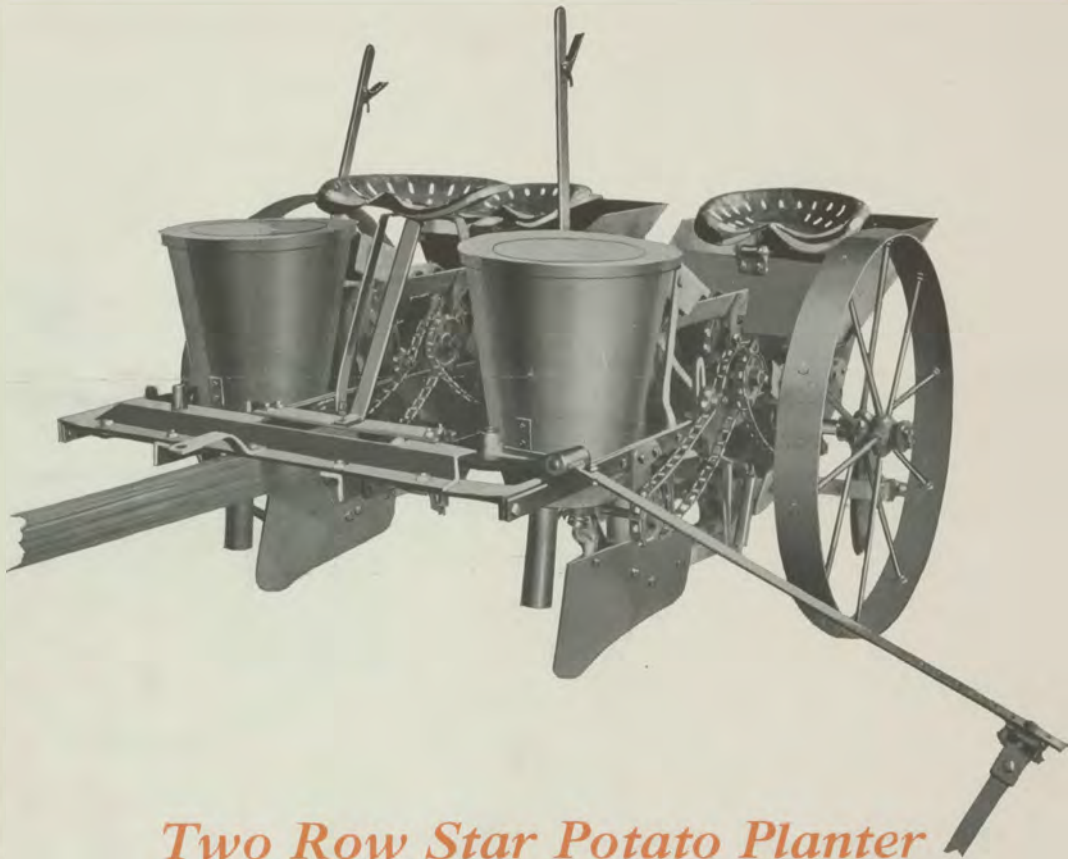

This machine has been thoroughly tested and we can assure you that it has no equal, as it will plant whole or cut seed — and plant 100%.

It is a light-weight and light-draft machine, and when a picker planter is desired, you will find in this machine just what you want in every way.

Change of distance in planting potatoes in the row can be made in five minutes, and can be set to plant any distance desired.

FAMOUS Ohio

Two Row Star Potato Planter

This machine carries all of the features of our one row bucket planter.

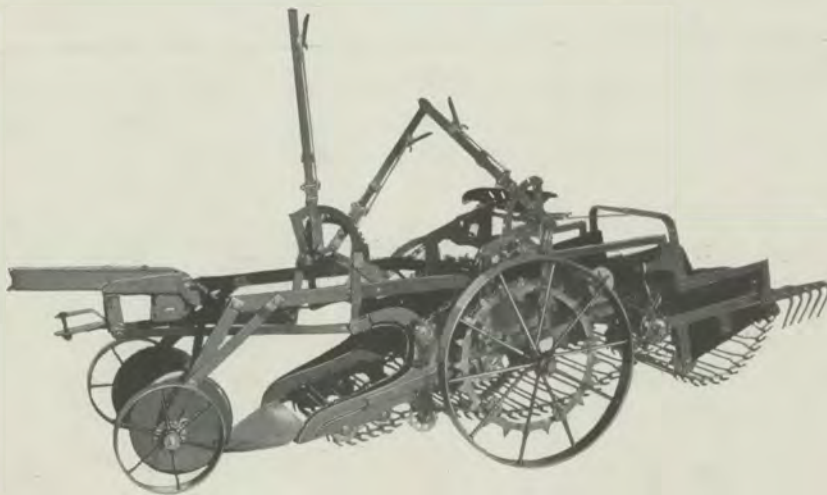

Is built exceedingly strong, yet light in weight and draft.

There is no sagging in the center which would cause the axle to spring, and wear out both axle and axle bearings.

This machine like our bucket single row planter is giving the best of satisfaction.

Each machine operates independent of the other, so you can plant with one machine in finishing up the field if not room for two rows.

Either horse or tractor drawn.

Sweet Potato Digger

This machine carries the general construction of our standard 22 in. digger.

However, by just putting on the vine trimmers, which cuts the vines at each side of the row, and a change in the elevating web which can be done in a few minutes, you have a successful digger for digging sweet potatoes.
