

TRADE MARK

"OLIVER"
"40"

Registered U. S. Patent Office

THE OLIVER.

FIRST and FOREMOST

FIRST in giving to the world the Chilled Plow.

FIRST in producing a plow that combines all the features essential to a perfect implement.

FIRST in studying the needs and demands of the farmer and successfully meeting them.

FIRST in variety, quality and unquestioned superiority of manufactures.

FIRST in establishing prices so that the best plow made can be bought at a very moderate figure.

The Genuine Oliver Chilled
Plows and Genuine Repairs

HAVE NO EQUALS

Made Only By The
Oliver Chilled Plow Works
SOUTH BEND, IND.,
U. S. A.

In this "Little Catalog" are shown a few illustrations out of the great many different sizes and styles of plows and other implements made that bear the Oliver Trade Mark.

If you want more detailed information about some particular implement or if you do not see just what you want—write and ask us about it.

It will give us real pleasure to hear from you.

OLIVER CHILLED PLOW WORKS,
SOUTH BEND, INDIANA

A. M. Ball took orders
for A. O. G and
delivered

Here we show our A-1 and A-2 Pony
Plows. Made with both wood and steel
beams and very popular. Capacity 4 1-2
x 8 and 4 1-2 x 9 inches respectively. The
B is a size larger, made with both wood
and steel beam, and like the A, is right
hand only. Turns a furrow 5 x 10 inches.

The A-C-1 and A-C-2 plows are of the same size and capacity as the regular A patterns but made with chilled cutter shares instead of plain. Either wood or steel beam. Right hand only.

The B-C, like the A-C, is made to meet the demand for a light plow with cutte share. Wood and steel beam. Right hand only. Capacity 3 x 10 inches.

This is the celebrated No. 40 known and used the world over. It represents a series, the numbers 10, 13, 19, 20, E-1, 40 and 40-X. Made right and left hand and with steel beams also as shown on the next page. Best and most popular plows ever made.

The No. 19 here shown represents the 40 series steel beam plows. Made right and left hand and all numbers with steel beams except the E-1.

The Nos. 111 and 222 Full Chilled Plows, "Guaranteed to scour perfectly in any soil, no matter how difficult, in which any other kind or style of plow made will scour."

They last three times as long as steel plows, do better work, one size lighter in draft, and handle easier. 12 and 14 inch cut. Made with wood and steel beams.

The No. 30 is one of our reliable patterns and has a host of friends. Made both right and left hand but with wood beam only. Capacity 8 1-2 x 13 inches.

The No. 17. This plow is the smallest of our low front chilled series. It is used extensively in Texas for plowing heavy sandy, mixed sandy and creek bottom lands. Steel beam and right hand only. Capacity 6 x 11 inches.

The Nos. 82, 83 and 84 comprise a series of chilled plows intended for general purpose work for which they are especially fitted. Their superior turning qualities make them all well adapted for sandy, gravelly and stony soils. Steel beam, right and left hand. 12, 14 and 16 inch cut.

The No. 13 Vineyard plow is especially fitted for vineyard and orchard work. The standard and beam are thrown to the center so as not to interfere with the growing vines and the handles carefully set with that object in view. Wood beam and right hand only. Capacity 6 x 11 in. Smaller vineyard plows also made.

This cut shows the O-98 and O-99 steel beam plows which are used very largely where great strength is required. Fitted with reversible shares and slips, also with solid point if wanted. Their excellent qualities fully justify their great popularity.

Here we have the O-Z series steel beam chilled middlebreaker plows for use in mixed and sandy soils. The series consists of the O-Z, O-Z-1 and O-Z-2, cutting 8, 10 and 12 inches.

The Nos. 508 and 509 are the most successful reversible plows ever produced. Lined to work perfectly when reversed either way. Light in weight, light in draft, steady running, easily handled. Capacity, No. 508, 8 x 13 inches; No. 509 8 x 15 inches.

The No. 534 is our latest pattern iron beam hillside plow. Works well on both hillside and level lands and is particularly adapted to rough or stony ground. Capacity, 8 x 13 inches.

The No. 1 Road and Grading plow is stoutly built, well braced and generally O. K. Made both right and left hand.

The No. 4 Cotton and Corn Lister. Light and attractive, embodying all the conveniences for this class of work. More of these listers sold the past season than any other on the market.

NO. 1 RIDING CULTIVATOR

A New Combination of Special Advantages. Patented Seat Bar Guide, Automatic Balance Frame, Horse Lift, Parallel Gangs, Pivot Frame. One lever (assisted by horses) raises both gangs and keeps frame balanced in one operation.

No. 2 WALKING CULTIVATOR

Balance frame, adjustable axles, coupled up short, strong and rigid. Light in weight. Many new features. Send for descriptive circular.

The No. 23 Reversible Sulky Plow is the "slickest" plow of its kind on the market today because of the horse lift, foot trip and tilting seat device. It will pay you well to look it over carefully.

The No. 26 Sulky Plow is a modification of the No. 21, having only one base. It has all the good features of the latter plow that make it so popular and is coming right to the front.

Our No. 11 or James Oliver Sulky plow.
Easy to handle, light and stout, besides
being low in price. Right and left hand.
A sure winner wherever used.

The No. 17 Gang for Orchard, Vineyard, Garden and Field is the handiest and most attractive plow of this type ever produced. Either two or three base. Chilled or steel bottoms.

The Oliver No. 1 is the best gang plow on wheels. Center hitch, high lift, no side draft, easily handled and gives perfect satisfaction. Will do all we claim for it.

TABLE OF WEIGHTS AND MEASURES

Avoirdupois weight is the only weight made use of in mechanical calculations; and all metals save gold and silver are weighed by it.

16 Drachms	1 Ounce
16 Ounces	1 Pound
28 Ounces	1 Quarter
4 Quarters	1 Cwt
20 Cwt	1 Ton

The Standard Avoirdupois pound is the weight of 27.7015 cubic inches of distilled water weighed in air, at the temperature of the maximum density (39.83), the barometer being at 30 in.

LONG MEASURE

12 inches	1 foot
3 feet	1 yard
6 feet	1 fathom
5 1-2 yards	1 Pole or Rod
40 Poles	1 furlong
8 Furlongs, or 1760 yds., . .	1 mile
3 Miles	1 League
