

THE SUCCESSFUL ENTERPRISE.

A MODEL PLOW.

—THIS—

NEW REMINGTON CLIPPER.

CARBON METAL.

THE NEW REMINGTON CLIPPER

HAS achieved a reputation unexampled in the history of Plows. It is not surpassed in any particular, but it is superior in form, finish, metal and light weight to any other cast Plow ever produced. The carbon metal of which it is made, being largely composed of cast steel, has all the hardness and scouring qualities of the chilled iron, and is much stronger. It is the lightest and strongest of all the Cast Plows.

NO CHILL IN OURS.

WE are not obliged to chill our moldboards to obtain the requisite hardness. The process of chilling disorganizes the natural crystallization of the iron, and makes it cross-grain and brittle. Hence the manufacturers of Chilled Plows are obliged to make their moldboards heavy and clumsy to prevent too frequent breakages. Of course the other parts of the Plows have to be proportionately heavy.

THE NEW

REMINGTON PLOWS

Full Rigged weigh 16 to 30 pounds less than the Chilled Plows of the same capacity.

THE PERFECT MODEL.

THE form of the NEW REMINGTON CLIPPER is acknowledged to be the culmination of Plow improvements. It is simply PERFECT; it is so acknowledged by every one who has seen it. It is the production of the best Plow maker in this country. For lightness of draft and ease of handling, it challenges the world! All we ask is for the farmer to take it home and try it before purchasing any other. He will say that he has never seen its equal.

THE NEW BOOM.

THE Chilled Plow Boom has had its day, and the demand of the farmers is now for something NEW and BETTER; and for something lighter to handle. The New Remington Clipper will just satisfy this demand, and lessen the hardships of plowing to both man and team.

THE STEEL ATTACHMENTS.

FOR soils which require Steel Plows, we make steel moldboards, shares and jointer blades—that interchange with the carbon—thus the farmer may have a Steel Plow and a Carbon Plow BOTH IN ONE, at a trifling additional expense. That is, for from \$5.00 to \$7.50 (according to size) the farmer may have a Steel Plow in addition to his Carbon Plow.

THE POPULAR VERDIOT.

THE NEW REMINGTON CLIPPER CARBON PLOW is pronounced by all who have used it, or seen it at work, to be one of the most substantial, practical improvements in Plows that has ever been made.

ADVANTAGES OF THE CARBON METAL.

WE are not only able to make the Carbon Plow LIGHTER than the Chilled Plow, but having no *warping* to overcome we can make the moldboard fit the standards without the use of *packing*, so that when a new moldboard is wanted the farmer will have no difficulty in putting it on in place of the old one. Every board fits the standard. Those who have had to replace moldboards for the Chilled Plow know what a disadvantage they labor under in this respect.

Every part of the Plow fits its place so perfectly that we can ship the Plows "knocked down," and the purchaser will have no trouble in putting them together.

OUR IMPROVED LANDSIDE.

THE form of our New Landside is just the EXACT shape to receive the least possible friction, which is one reason for the exceeding lightness with which the Plow draws. Much attention has been given this Landside, and simple as it seems, it is actually perfect, and one of the finest features of the Plow.

OUR SHARES.

WE manufacture three forms of Shares for each Plow. We wish to call attention to this fact and to our reasons for so doing.

FIRST. We put the ordinary Shares on all Plows, [unless otherwise ordered]. This is for ordinary work in all ordinary conditions of soil.

SECOND. There are kinds or conditions of soil in which the ordinary Share is not strong enough. For this we have what we call the Stone Share, with short wing.

THIRD. There are kinds or conditions of soil in which the ordinary Share does not suck deep enough; thus making it wear on the under side of the point, and causing the Plow to "run on its nose." For this we have the Deep Suck Share.

We also make shares of three kinds of metals—the ordinary chilled, the Carbon and the Steel. Our Carbon Shares are superior to any other cast Shares ever made.

OUR NEW JOINTER.

With Either Steel or Carbon Blades.

IS a great improvement upon ALL OTHERS. Its moldboard does the work of a Colter as well as a Jointer. It works to a charm and renders the Plow so much lighter to handle. It will throw all the stubble in the bottom of the furrow, covering it perfectly; or it will turn under sod, or weeds, so that nothing green will be left in sight. It also leaves the surface of the ground as mellow as if the harrow had followed the Plow.

We urge every farmer, when purchasing a Plow, to take a Jointer home and try it. He can return it if he does not want it. But very few will ever be returned if farmers have ground in which they can use them. It is so valuable for inverting the weeds, stubble or sod, and putting them entirely out of sight, leaving the ground smooth and mellow, that it fairly pays for itself on almost every acre plowed with it.

OUR WARRANTY.

THE REMINGTON AGRICULTURAL CO., guarantee to the Dealer, as well as to the farmer, that every Remington Carbon Plow is well made, of good material, and if properly handled will give perfect satisfaction, subject to a full day's trial in the field. If it fails to comply with this warranty, after being tried by both, the Plow can be returned to the dealer to be held by him subject to the manufacturers' order.

DESCRIPTION OF CARBON PLOWS.

No. 4 D. is a right hand one horse Plow—suitable for cord, hop and cotton cultivating. It turns a furrow 4x8 inches.

No. 6 D. is a right hand, one horse Plow, and can be used by two light horses or mules. It has no equal for vineyard, nurseries, hop grounds and gardens. It can turn a furrow 6x11 inches.

No. 8 D. (both right and left hand) is a light, two-horse Plow, and is equally as perfect in work as the larger Plows. It differs only in being lighter and making a smaller furrow. It can turn a furrow 6x12 inches.

No. 9. D. (both right and left hand) is a medium two-horse Plow, adapted for two light horses, doing perfect work in both sod and stubble. It can turn a furrow 7x13 inches.

No. 10 (both right and left hand) is a two-horse Plow doing perfect work in both sod and stubble. It will never fail to give perfect satisfaction. It can turn a furrow 7x14 inches.

No. 12 (both right and left hand) is the size principally in use, and is adapted to all kinds of work. We consider this, owing to its size, the perfection of a Plow, for shape, lightness of draft, and for doing perfect work. We especially recommend this size to the ordinary trade. It can turn a furrow 8x15 inches.

No. 15 (both right and left hand) is the largest size Plow we make, and is adapted to three horses as well as two. It is in all particulars the equal of No. 12, but has larger capacity. It is often used for three horses, and is very popular as a three horse Plow. It can turn a furrow, in sod, 9x18 inches.

No. 25 (both right and left hand) is an Iron Beam Carbon Plow, a very trifle smaller than No. 12. It has given excellent satisfaction, and turns a furrow 7x14 inches.

No. 14 is the same as the No. 25, except that it has a steel moldboard. It is also furnished with a steel share if so ordered.

THE NEW REVERSIBLE CARBON PLOW is the lightest in weight and draft of any Reversible Plow in the market. (We furnish a steel moldboard for it if so ordered.) It turns a furrow 6x12 inches.

PRICE LIST AND DESCRIPTION

—OF—

NEW REMINGTON CARBON PLOW.

	Turns furrow.	Plain.	Coulters or Jointer.	Jointer & Wheel.	With Steel Moldboard. Extra.	With 8x1 Share Extra.
