NEW YORK.

January 2d, 1888.

When we first commenced the manufacture of Mowers and Reapers, about ONE-THIRD OF A CENTURY AGO, the business was in its infancy, and the cutting of grass and grain by machinery was still largely a matter of experiment.

After a few years experience in building a one-wheeled, rigid bar machine, which took rank as the BEST OF ITS DAY, we were fortunate enough to be able to offer to the farmers for THE HARVEST OF 1858, THE GREAT NOVELTY OF A TWO-WHEELED JOINTED BAR MOWER, which has ever since been RECOGNIZED AS THE STANDARD, and which under our ORIGINAL TRADE-MARKS of "BUCK-EYE," "NEW MODEL" and "ADRIANCE," has met with that PHENOMENAL MEASURE of SUCCESS which is only attained by the one article that is PRE-EMINENTLY SUPERIOR to all others in any department of invention or manufacture.

We have paid the penalty of all successes in having MANY IMITATORS, but having STARTED A LONG WAY IN ADVANCE of all competitors, we have maintained our position AT THE HEAD, and our manufactures are known throughout the world as THE BEST.
