Bement Spading Harrow.

(Morgan's Patent.)

Dealers who want to get away from ruinous competition, and secure large sales and satisfactory profits, should write us immediately.

Better than a Disk Harrow because it leaves the ground much more thoroughly pulverized and leveled and is a great deal lighter draft.

In a seven foot harrow there are 14 revolving sets of spades, or 84 cutting points.

This tool stands without a rival, positively the most successful and universally popular harrow ever made.

Write for the agency while there is still an opportunity.

THE following is a list of a few of our Illinois customers who handled the Harrow last year and have ordered the number set opposite their names for the coming season. This is an indication of what you can do if you are a hustler.

We would be glad to have you write any of these firms for further information.

Write to any of these firms and get honest recommendations.

We have a seeder attachment for the 6, 7 and 8 feet sizes only.

A fair trial will convince any person of good judgment that the Spading Harrow is absolutely the best cultivating tool ever invented. Disk Harrows cannot be sold in competition with it. The trade in the West has never been thoroughly canvassed, and we propose to see that the merits of this wonderful tool are known and appreciated in every locality.

BEMENT SPADING CULTIVATOR.

(Morgan's Patent.)

Price, with Steering Device, - \$38 00 | Price, less Steering Device, - \$35 00

The above cut represents the new *All Steel Frame* Bement Spading Cultivator (Morgan's Patent), the most successful riding cultivator on the market for all kinds of work, and on all kinds of ground. On the side hill as well as on the smooth prairie, it can be used for surface or deep cultivation at the will of the operator. The gangs consist of four blades, or knives, on each side, with six knives to the set, or twenty-four cutting or working knives on each side, or

FORTY-EIGHT KNIVES IN ALL,

constructed in such a manner as to absolutely pulverize all the ground. The knives are made of spring steel, and the part penetrating the ground is sharpened and polished and will work the ground to any desired depth with ease. It also has a

PATENT STEERING DEVICE,

consisting of a movable or loose pole with foot-levers, which enables the operator to guide it with ease, and dodge crooked corn that could not otherwise be worked successfully.

Made also without steering device at a slightly reduced price.

By properly adjusting the gangs it will leave the ground level. And again, if desired, turn the gangs a little more and it will hill the corn in first-class style. This Cultivator is especially adapted to working trashy ground where there are cornstalks and other rubbish to bother an ordinary cultivator. The spades will go right through and pulverize all the ground and leave the rubbish behind, and

WILL NOT CLOG.

This Cultivator is also adapted to putting in oats, and other small grain, on corn ground in the spring, and as a pulverizer it has no superior. It is provided with cleaners preventing it from clogging in that kind of ground. The Spading Cultivator can be handled easier, and do more work and give better results than any other tool of its kind on the market, and live dealers will do well to look this up and secure the agency and exclusive territory early.

We want good, responsible and live dealers with exclusive territory to handle this Cultivator in all principal towns throughout the western states. Write for special price and terms.

We also make the Spading Harrow.

Do you want to handle a specialty that has no competition?
