

Bissell Chilled Plow Works.

HILLSIDE PLOW.

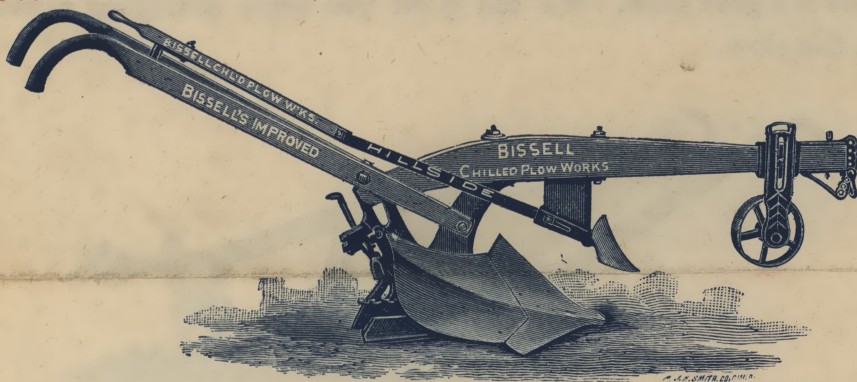

THE growing demand for Hillside Plows, and the many inferior implements of this kind placed on the market, called our attention to perfecting a Hillside Plow. The cut shown below represents the **BISSELL IMPROVED HILLSIDE PLOW**. Absolutely perfect and guaranteed to do good work. Made in four sizes.

All parts of No. 50 and No. 55 interchangeable.

The spring and catch to hold the mouldboard in place is simple and cannot get out of order and is not liable to break. These are the invention of Mr. Westervelt the President and Manager of the Bissell Chilled Plow Works. Also the Jointer. Our share

is made broad and strong to turn a clean cut mold and at the same time leave the bottom of the furrow clean and level.

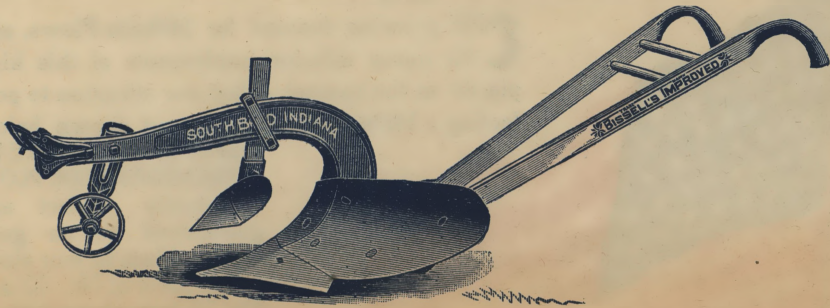

No.	Weight.	List, Chilled.	Steel Mold. Chilled Share	Steel Mold. and Share.	Turns a Furrow
35		\$ 5 50			
40	75 lbs.	7 00			8 to 10 ins.
50	95 lbs.	8 50			10 to 12 ins.
55	100 lbs.	9 00	\$10 50	\$12 50	11 to 13 ins.
60	125 lbs.	9 50	11 00	13 00	12 to 14 ins.

Jointer extra \$2. Wheel extra \$1. Steel Shares for all sizes. Shifting Clevis, \$1 net, extra for all plows.

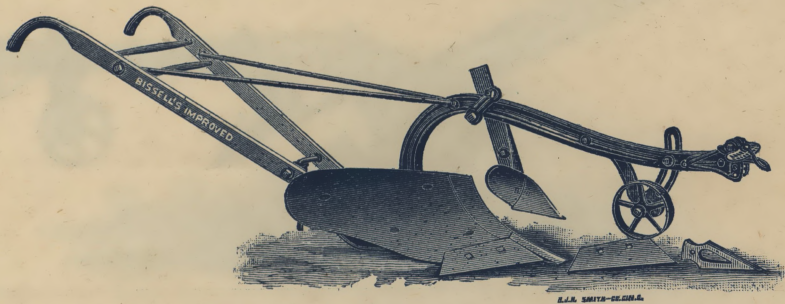

MANUFACTURED BY
BISSELL CHILLED PLOW WORKS, South Bend, Ind.

Bissell Chilled Plow Works.

Our No. 14 Left Hand and No. 140 Right Hand.
Made in Wood or Iron Beam.

This Plow is especially adapted for clay and gravelly soil. It has great strength; the landside is flared at the bottom; the mouldboard has a very graceful turn and has extra shin piece. All bolts are oval head, the handles are long, giving perfect control of the plow; the beam is short, giving a close hitch and thus insuring light draft. This is a good plow. We can quote you some interesting prices on this plow.

Our Reversible Plow, the Best in the World.
