

The General Opinion Is

That manure applied with a spreader is worth from 1 to 2 dollars per ton more than when applied by hand.

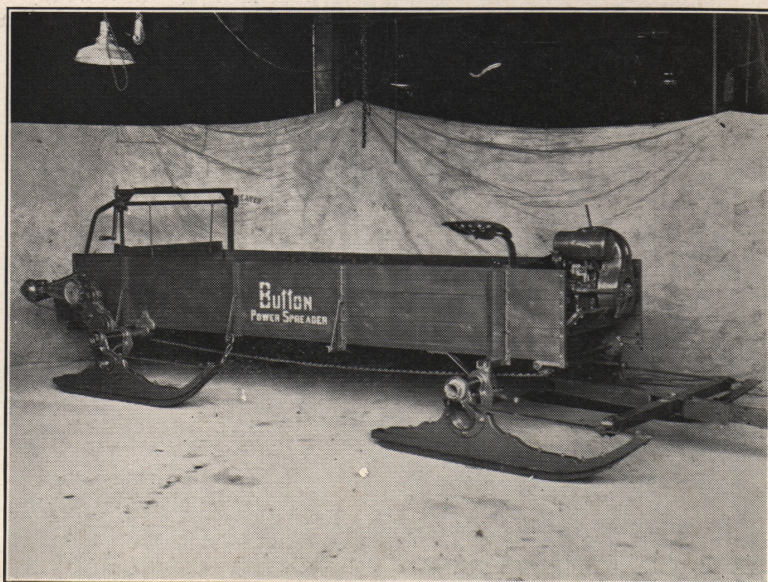

Cows are in the barn about 230 days of the year. Can you afford to be without

THE BUTTON POWER SPREADER

when with this spreader you can
use it every day no matter
how deep the snow.

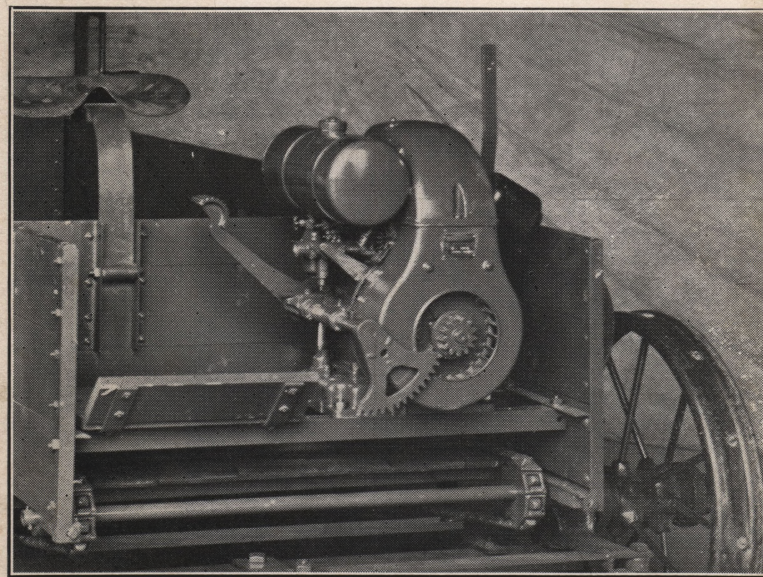

The change from wheels to runners is very simple. Take off the wheels and slip runner on the axle in place of wheel; connect special tongue holder and you are ready for snow. The spreader works just the same. With this outfit you have no money invested in a spreader that you cannot use
