No. 20.

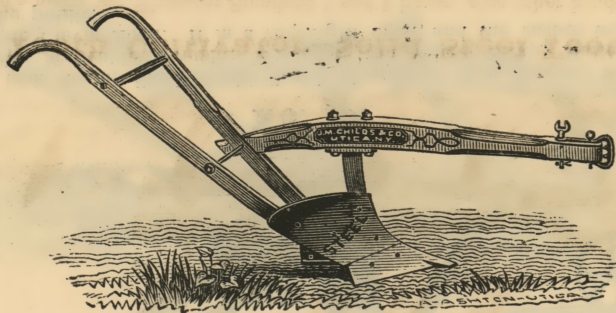

Has an approved form of Mould Board, Landside and Point of a perfectly uniform and high finish, tempered very high by a patent process; has a Patent Adjustable Clevis, admitting of a change *up or down* by the removal of one pin. Also, an Adjustable SOLID STEEL COULTER with Malleable Wrench; a curved Wrought Iron Standard, combining strength and beauty.

No. 20 X is similar to No. 20, having a wider and heavier Mould Board, and a broader point for boggy or quack plowing, where it is necessary to cut full width of furrow.

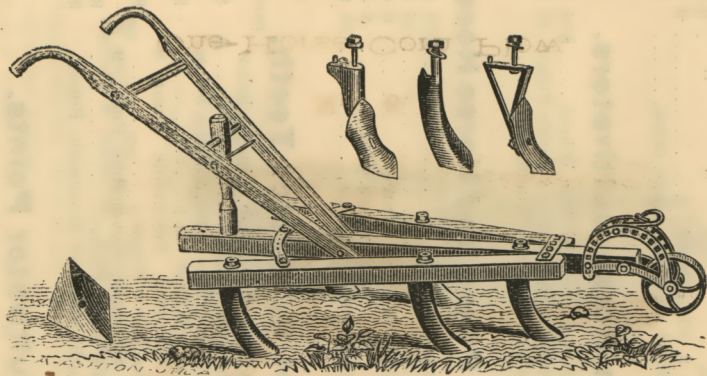

No. 15.

Has an Iron Beam; Steel Mould Board of *superior* high temper; SOLID STEEL COULTER, with Malleable Wrench; Wrought Iron Wheel Strap; Malleable Clevis, with new style Clevis Hook. It is a very light draft, and the easiest working Plow yet before the public.

No. 6.

One-Horse Corn Plow.

5 Tooth Cultivator--Solid Steel Tooth.

We make the Wrought Standard 1 and 2 horse; also other kinds.

Kent's Hand Corn Planter.

Simple and not liable to get out of order. It can be regulated to drop any required number of seeds, and do it evenly. It covers the Corn, and also has a stop to regulate the depth.

PRICE\$5.00

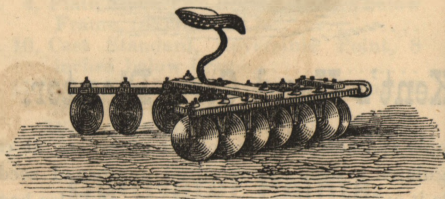

Steel Scraper.

30 inch, \$12 00.

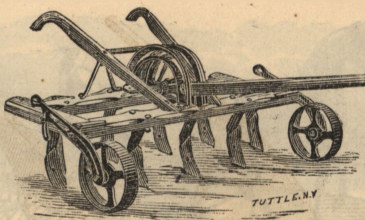

34 inch, \$13 00

When Chain or Iron Bails are wanted we add \$1 00 net.

Nishwitz Pulverizing Harrow.

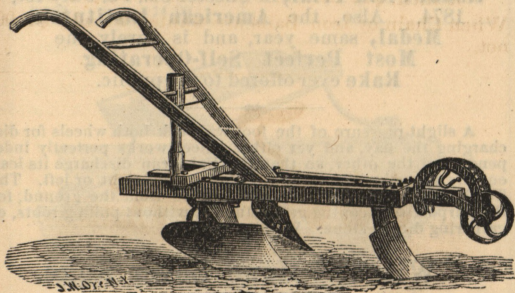

PRICE \$30 00.

The American Pulverizing Cultivator.

The greatest results with the least draft. It is superior to any other Cultivator in adjustability to any depth of work by the pole and auxiliary wheels. Is warranted in every particular, and the frames are made of wood, or wrought and malleable iron.

Wood Frame,.....	\$25 00
Iron Frame,....	28 00

Sayre's Patent Horse Hoe.

PRICE \$12 00.

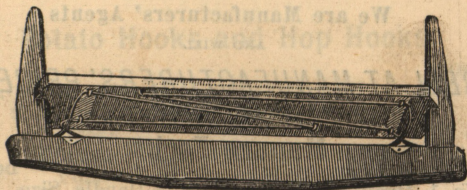

THE
“WISNER”

Was Awarded the Gold Medal at the Great National Field Trial, in Chester Co., Pa. July 1st, 1874. Also, the American Institute's Medal, same year, and is surely the **Most Perfect Self-Operating Rake** ever offered to the public.

A slight pressure of the foot will lock both wheels for discharging the hay, and yet either wheel works perfectly independent of the other, so that the Rake can discharge its load equally as well while turning either to the right or left. The Teeth can be set at any required height from the ground, for the purpose of gleaning grain stubble, without pulling roots, or gathering dirt or stone. We also have the

“Wisner” Hand Lever Rake.

Which is like the above, excepting it is not self-operating. It however, is operated very easy, having a balanced head, so that the draft of the horse assists in discharging the hay, and requires very little effort to move the lever.
