The
DAIN SIDE DELIVERY RAKE
and
DAIN HAY LOADER

The Greatest Pair of Hay Tools on Earth.

They cure your hay quick and best, put it on your wagon with the least labor. Don't shock hay and pitch it by hand. Its too slow, too expensive, too hard work.

Air cure it with the **DAIN SIDE DELIVERY RAKE**. Have it ready for the mow in a few hours, make it worth at least a dollar more per ton. The Dain Side Delivery Rake has three sets of teeth, they revolve slow, gently place the hay in a loose continuous windrow, will not damage the tender leaves.

Put your hay on the wagon with the light draft **DAIN HAY LOADER**, the one-man machine, that pushes the hay forward and makes loading the wagon easy work.

This Dain Loader hasn't a troublesome crank shaft, nor a single cog gear or twisted chain, neither has it a return carrier to drag the hay back off the wagon. Its built to run light, it does the work just right. This pair of tools do the business.

Don't ever try to make hay again without them. The time, work and worry they save will soon pay for their cost. Write us for full information.
