

7-H
La Crosse, Wisconsin,
August 1st, 1919.

Dr. Ada Hayden,
Ames, Iowa.

Dear Dr. Hayden:-

I suppose by the time you receive this letter Miss Tiernan will be gone and the young lady who is to take care of the clerical work will need quite a good deal of assistance. Most of the queries that come in will be in reference to weeds. Most of the answers can be made short and if the weed is described in the weed flora we use the method of extermination from the weed flora or some of them may be described in the unlawful weeds. If there are letters coming in that you are uncertain of, you may ask that they be held over until either I or Miss King return. I hope you have answered the letter in regard to the germination of the soy beans.

I expect to be in La Crosse until tomorrow evening when I go to St. Paul where you can reach me in care of Dr. Stakman. I shall be in St. Paul for two days or a day and a half and then I go to Graceville, Minnesota, where I shall be a day and then I expect to go back into Iowa and then start for Colorado.

Give my kind regards to the other people of the Department and add a note in there that I have been terribly busy at McGregor inspecting parks and making reports.

Yours truly,

LHP/VB
