OFFICE OF DIRECTOR  
UTAH STATE HEALTH DIVISION

Mr. Dennis Dalley, Chief  
Radiation and Occupational Health Section  
Utah Division of Health  
44 Medical Drive  
Salt Lake City, UT 84113

Dear Dennis:

Some time ago Paul Smith asked me to obtain for you the available data on plutonium in soil for Utah. I believe you should have received by now the data which we obtained from AEC Health and Safety Laboratory (HASL) reports. I am enclosing for your use preliminary data which I have just received from the off-site monitoring staff here at the National Environmental Research Center--Las Vegas.

The data shown on the enclosed figure were obtained from samples collected by the off-site monitoring staff in July 1974. The locations shown on the figure as EPA-HASL sampling points were sampled jointly by the NERC off-site monitoring and HASL staffs in June 1974. Analysis of these samples is not complete and will not be complete for some time. I will try to send you these results when they become available.

Best wishes.

Sincerely yours,

*Richard L. Douglas*
