Mr. Lee Bush
Cambria, Illinois

Dear sir:

We have a rare bird wintering in this area and believe it should be included in the Winter Season of Audubon Field Notes.

The first record of the Varied Thrush in the Cedar Rapids area was made in 1971. It was first observed at a feeder January 24th and is being observed daily to the time of this report. The bird feeds mainly on seeds scattered on the ground.

Sincerely yours,

Lillian Serbousek
