# Recreation Area Built by W P A

An extensive WPA project is that sponsored by the city of Dubuque, covering the recreational area on City Island to provide employment for approximately 144 workmen, most of whom are from relief rolls. The view shows operations at the bridge site and River road. Included is the building of a bridge, construction of a concrete box sewer 12x12x1,020 feet long, laying an 800 foot corrugated culvert pipe, and the operation of a quarry to produce 43,000 cubic yards of stone for rip-rapping the river levee to protect the airport, and to also produce 6,000 cubic yards of crushed stone for road surfacing. The work also involves approximately a half-million cubic yards of road grade fill, a million cubic yards of sand fill and 90,000 cubic feet of block stone. At the present this WPA project is about one-third complete.
